Be aware of ransomware

Ransomware is a form of malware (malicious software) that takes over a computer.

Ransomware can lock down all operations on a computer and deny users access to their data. Computer users cannot reverse this lock down without the help of the hacker, who usually requires a ransom in return for a decryption key.

The costs can range from a few hundred dollars to thousands, say IT experts.

The U.S. Department of Education has warned that hackers are employing ransom-

ware as they target schools with insufficient security.

According to the Federal Bureau of Investigation, schools are particularly vulnerable because their security is not always up to par and they have information that's of value to hackers, including students' personal information.

According to McAfee, more than four million ransomware variants have been detected online, a 270 percent increase since 2013, and ransomware is expected to be a continuing and significant problem for schools.

In Education

The following students from Savannah received degrees from the University of Memphis during May 5 commencement ceremonies at FedExForum.
